Summary

I build marketplace and real-time SaaS products from zero to production. Over the past years, I've taken full ownership of multiple systems from architecture and backend APIs to frontend implementation, deployment, and infrastructure decisions. My experience includes:

- Multi-role marketplace platforms with admin tooling and access control
- Real-time communication systems using WebRTC (video/audio/chat)
- Booking and scheduling logic with workflow automation
- Production deployments using Nginx and Linux environments

I'm particularly strong at: Designing clean backend architectures (Node.js, REST APIs, JWT auth) Connecting complex frontend flows to scalable backends Making system-level technical decisions instead of just writing features While some founder-led projects didn't scale commercially, they strengthened my ability to think in systems, anticipate edge cases, and ship complete products not partial implementations. I hold a Master's degree in Information Technology Engineering (E-Commerce), with a thesis focused on software design patterns and clean architecture. I'm currently focused on contributing to growing SaaS teams where ownership, product thinking, and execution speed matter.

Experience

08/2024 – 11/2024

Freelance Full-Stack Developer, Self-Employed

Architected and developed a production-ready marketplace platform using the MERN stack.

- Designed a scalable product catalog with filtering, sorting, search, category, and brand management
- Built a modular product management system with image upload and CRUD operations
- Developed responsive shopping cart and checkout workflows optimized for mobile and desktop
- Implemented order management and simulated payment processing workflows
- Created role-based admin dashboard for managing products, users, and orders
- Structured backend APIs using modular architecture and reusable components
- Deployed frontend and backend services using modern cloud hosting platforms

Tech Stack:

React.js, Node.js, Express.js, MongoDB, JWT Authentication, REST APIs, Bootstrap, Vercel

09/2021 – 02/2022

Full-Stack Developer (Founder Project / Startup Initiative), Self-Employed

Designed and developed a real-time legal consultation platform connecting lawyers and clients.

- Implemented one-to-one audio/video communication using WebRTC and Socket.io
- Built secure authentication and role-based access control for lawyers and users
- Developed real-time messaging and communication workflows
- Designed backend APIs and scalable server-side architecture using Node.js
- Managed full product lifecycle from MVP architecture to deployment decisions
- Implemented encrypted communication workflows using hybrid encryption concepts

Tech Stack:

Node.js, Express.js, MongoDB, MySQL, Socket.io, WebRTC, JWT, RSA Encryption, Linux, Nginx

01/2023 – 04/2023

Android & Backend Developer (Founder Project), Self-Employed

Developed a booking and scheduling platform for barbershops and beauty salons.

- Implemented appointment scheduling, availability management, and booking workflows
- Built backend services for authentication, scheduling logic, and user management
- Designed responsive mobile-first user interfaces
- Managed full-stack development from MVP validation to deployment
- Gained hands-on experience with product iteration and operational workflows

Tech Stack:

Node.js, Express.js, MongoDB, MySQL, REST APIs, JWT, Android, Java, Linux, Nginx

09/2020 – 08/2021

Android & Backend Developer (Project-Based), Fartak Medical Systems

Built a telemedicine Android application connecting doctors and patients via real-time audio/video calls and chat.

Integrated WebRTC for live communication and real-time data exchange.

Developed a Node.js backend to handle authentication, messaging, and medical data transmission.

Implemented device connectivity features to transmit patient clinical data from oxygen concentrator devices.

Worked closely with medical and technical stakeholders during the COVID-19 period to support remote patient monitoring.

Teach Stack: Android Development, Java, Node.js, Express.js, MongoDB, REST APIs, MySQL, JSON, JSON Web Token (JWT), Nginx, Linux Server, Socket.io, WebRTC, Social Networking Apps, RSA Security, Encryption, Data Encryption Standard (DES)

06/2019 – 09/2019

Full-Stack Developer (Contract / Project-Based), GitiServer

Designed and developed an Android application to track employee working hours based on task-level activity.

Integrated Trello APIs to fetch tasks, assignments, and activity data in real time.

Implemented logic to calculate working hours and compensation based on task type and workload.

03/2019 – 05/2019	Collaborated with stakeholders to translate operational requirements into a functional digital tool. Teach Stack: Android Development, Java, REST APIs, MySQL, Trello, Data Processing, Time Tracking Android & Backend Developer (Contract / Project-Based), Sursiz (Startup) Developed a marketplace application connecting employers with skilled professionals. Implemented core marketplace features including user roles, profiles, and matching flows. Built Android client and backend services using Node.js. Collaborated with a startup team to rapidly deliver an MVP under limited resources. Teach Stack: Android Development, Java, Node.js, Express.js, REST APIs, MongoDB, MySQL
01/2025 – 05/2025	Android Developer (Research & Product Development Project) Designed and developed an Android-based gamified mathematics learning application for elementary school students. • Designed and implemented 8 interactive educational mini-games covering core mathematics concepts • Applied gamification mechanics including points, rewards, progress tracking, and achievement systems • Developed local data persistence and user progress management • Created child-friendly user interfaces optimized for engagement and usability • Integrated educational objectives with game design principles to improve learning motivation and enjoyment • Built the application as part of a research-driven project evaluating the effectiveness of gamified learning Tech Stack: Java, Android SDK, SQLite/Room Database, Material Design, Game-Based Learning, Gamification

Education

M.Sc. in Information Technology Engineering (E-Commerce)

Thesis focused on Software Design Patterns, Clean Architecture, and scalable software systems.

Projects

E-Commerce Platform, Freelance Full-Stack Developer

Production-ready MERN marketplace platform featuring:

- Product catalog and advanced filtering
- Admin dashboard and role-based workflows
- Shopping cart and checkout system
- Responsive mobile-first design
- Modular backend architecture
- Image upload and product management

Real-Time Video/Audio Calling System (WebRTC + Socket.io)

Built a one-to-one real-time communication platform using

WebRTC and Socket.io  with:

- Audio/video calling
- Real-time messaging
- Signaling server implementation
- Connection lifecycle handling

Social Network Application

Designed backend architecture with Node.js, Express, and MongoDB

Implemented encrypted messaging using RSA + symmetric hybrid encryption

Added user profiles, posts, comments, friend system, and notifications

Appointment Booking System

Full-stack booking platform with:

- Scheduling workflows
- Admin management system
- Authentication and authorization
- Responsive UI and REST APIs

Gamified Mathematics Learning Application, Android
educational application designed for third-grade elementary students.

Key Features: • 8 mathematics mini-games • Point and reward system • Progress tracking • Achievement mechanics • Interactive learning activities • Child-oriented UI/UX design • Offline functionality

Technologies: Java, Android SDK, SQLite/Room Database

Skills

React.js

Node.js

Express.js

MongoDB, MySQL

REST APIs

JWT Authentication

Socket.io

WebRTC

Redux (state management)

Bootstrap / Responsive UI

PWA

Clean Architecture

Software Design Patterns

Linux server administration

Nginx

Git / GitHub

Deployment (Vercel, Render, Linux VPS)

RSA Encryption (Hybrid)

Material Design
