Summary

Full-Stack Product Engineer with 5+ years of experience building scalable SaaS products, marketplace platforms, and real-time applications using React, Node.js, Express.js, MongoDB, and TypeScript.

I help founders build software that continues to scale as their business grows by making engineering decisions that reduce technical debt, simplify future development, and improve long-term maintainability.

My experience covers the complete product lifecycle, from system architecture and backend APIs to frontend implementation, production deployment, and ongoing optimization.

Passionate about turning complex business requirements into reliable software that supports sustainable product growth rather than short-term feature delivery.

Experience

01/2026 – 05/2026

Android Developer (Research & Product Development Project)

- Developed a gamified mathematics learning application for primary school students.
- Implemented interactive educational games, rewards, and progress tracking.
- Designed child-friendly user experiences focused on engagement.
- Applied maintainable software design principles for future expansion.

Tech Stack: Java, Android SDK, SQLite, Room Database, Material Design

08/2024 – 11/2024

Freelance Product Engineer (Marketplace Platform), Self-Employed

- Designed a production-ready marketplace architecture focused on scalability and long-term maintainability.
- Built modular backend services and secure REST APIs to simplify future feature development.
- Implemented shopping, checkout, and administrative workflows with role-based access control.
- Deployed the application using modern cloud hosting and production-ready workflows.

Tech Stack: React.js, Node.js, Express.js, MongoDB, REST APIs, JWT Authentication, Bootstrap, Vercel

01/2023 – 04/2023

Independent Product Engineer – Booking Platform, Self-Employed

- Designed and developed a scheduling platform focused on operational efficiency and scalable appointment management for service-based businesses.
- Architected booking workflows for appointments, scheduling, authentication, and business operations.
- Built modular backend services supporting future business expansion and feature development.
- Delivered responsive user experiences optimized for both administrators and customers.
- Led technical decisions from MVP planning through deployment preparation.
- Validated product ideas while balancing rapid delivery with maintainable software architecture.

Tech Stack: Node.js, Express.js, MongoDB, MySQL, REST APIs, JWT, Android, Java, Linux, Nginx

09/2021 – 02/2022

Independent Product Engineer – Real-Time Communication Platform, Self-Employed

- Architected a secure WebRTC platform supporting video, audio, and real-time messaging.
- Designed scalable backend services for authentication, authorization, and communication workflows.
- Built modular APIs focused on maintainability and future product growth.
- Managed the product from architecture and MVP planning through deployment.

Tech Stack: Node.js, Express.js, MongoDB, MySQL, WebRTC, Socket.io, JWT, RSA Encryption, Linux, Nginx

09/2020 – 08/2021

Android & Backend Developer (Project-Based), Fartak Medical Systems

- Developed backend services for a telemedicine platform during the COVID-19 period.
- Integrated secure WebRTC communication for video, audio, and messaging.
- Built services for transmitting clinical data from medical devices.
- Focused on security, reliability, and production stability.

Tech Stack: Android, Java, Node.js, Express.js, MongoDB, REST APIs, JWT, MySQL, WebRTC, Socket.io, Linux, Nginx

06/2019 – 09/2019

Full-Stack Developer (Contract / Project-Based), GitiServer

- Contributed to the development of a service marketplace platform.
- Built backend services supporting authentication and user management.
- Implemented marketplace workflows for employers and professionals.
- Delivered MVP features in a fast-paced startup environment.

Tech Stack: Android, Java, REST APIs, MySQL, Trello API

03/2019 – 05/2019

Android & Backend Developer (Contract / Project-Based), Sursiz (Startup)

- Contributed to the development of a marketplace platform connecting employers with skilled professionals.
- Built marketplace workflows including user roles, profiles, and matching systems.
- Developed backend services supporting authentication and marketplace operations.
- Collaborated in an agile startup environment to rapidly validate and deliver MVP functionality.
- Balanced fast product delivery with maintainable software implementation.

Tech Stack: Android, Java, Node.js, Express.js, MongoDB, REST APIs, MySQL

Education

09/2019 – 12/2021

M.Sc. in Information Technology Engineering (E-Commerce), *Master's degree*
Thesis focused on Software Design Patterns, Clean Architecture, and scalable software systems.

Projects

- Marketplace Platform, *Freelance Full-Stack Developer***
Production-ready marketplace architecture featuring modular backend services, role-based administration, secure APIs, and scalable product management workflows designed for long-term business growth.
- Real-Time Consultation Platform**
Designed a secure WebRTC-based communication platform supporting video, audio, messaging, authentication, and encrypted communication for professional online consultations.
- Social Network Application**
Designed backend architecture with Node.js, Express, and MongoDB
Implemented encrypted messaging using RSA + symmetric hybrid encryption
Added user profiles, posts, comments, friend system, and notifications
- Booking & Scheduling Platform**
Built a workflow-driven booking system focused on appointment automation, authentication, scheduling, and operational efficiency for service businesses.
- Gamified Mathematics Learning Application, *Android educational application designed for third-grade elementary students.***
Key Features: • 8 mathematics mini-games • Point and reward system • Progress tracking • Achievement mechanics • Interactive learning activities • Child-oriented UI/UX design • Offline functionality
Technologies: Java, Android SDK, SQLite/Room Database

Skills

- React.js
- Node.js
- Express.js
- MongoDB, MySQL
- REST APIs
- JWT Authentication
- Socket.io
- WebRTC
- Redux (state management)
- Bootstrap / Responsive UI
- PWA
- Clean Architecture
- Software Design Patterns
- Linux server administration
- Nginx
- Git / GitHub
- Deployment (Vercel, Render, Linux VPS)
- RSA Encryption (Hybrid)
- Material Design
